PROJECTS

Android application for Holmium Technologies — *Android Studio | MySql | PHP*

- Prototype for the working model of real-time application.
- Uses MySql and php to fetches data.
- Represent the fetched data in form of graphs.

See Project:

<https://github.com/paulo35/Holmium-Technologies-Portal-Prototype>

Model: <https://youtu.be/mwCq2y-OH3A>

Android application for Transliteration Based Children's e-magazine [Kids Magazines] — *Android Studio | Firebase*

- Application gives platform to children for learning Bengli-language along with the english translation at the run-time.
- Helps children to learn and enjoy with modules such as Books, Music, Videos etc.
- Also, gives facilities to upload own stories, music and videos.

See Project: <https://github.com/paulo35/Kids-Magazine>

Model: <https://youtu.be/dtWfMHM8TnU>

Android application for Hostel Management [JUET Files] — *Android Studio | Firebase*

- The project aims for developing a customized, user friendly android application.
- Helps in hostel related concern such as
 - ◆ Room Maintenance
 - ◆ Laundry Section
 - ◆ Notice Board
 - ◆ Lend & Borrow
 - ◆ General information report.

See Project: <https://github.com/paulo35/JUET-Files>

Model: <https://youtu.be/3WyNVFIFFoM>

Component based application - Airbus A380 — *J2EE | Junit Testing*

- A component based java application built by integrating 61 different components to create a prototype of Airbus A380 airplane along junit tests for individual components as well as procedures.
