Major Project:

- Title : **“Automatic auditorium smart assistance”**
- Introduction : principle of this project is **conserve energy** and reducing **manual effort** by using electronic automation system, this is specially designed for Auditorium which is fully automated.
- Objective: primary concern of this project is completely automized the Auditorium setup with the help of microcontroller Or Digital circuit. It's for the automation of Auditorium is to conserve electricity by Limited consumption only as per the Requirement. The Auditorium setup is designed to be user control as well as manual control both can be selected as per the Requirement of user.
- Hardware: ARDUINO UNO R3 (AT mega 328p) , PIR, RELAY, HC-05 BLUETOOTH MODULE, LED, DC MOTORS
- Working: Placing PIR sensors inside & outside of main gate of auditorium for attendance counting, this PIR sensor Sense the human body through it's heat. Then this Sensors send the all information to the Arduino uno Which has programmed for switching electronic device's. Then according to attendance Arduino uno starts AC, lights, and projector , and rest of the light's and ac will remain off.
In this system partition portion in canter of auditorium, which is for handle the people who seats randomly Weather it last corner of Auditorium, in first curtain will be closed until counting reaches it's limit, after Getting full the first half portion curtain will open and remain ac and lights will turned on.
