- Inter school Drama Competition.

Academic Project

Title : Blood Management System

Platform : Java, Spring, Hibernate, Angular, Bootstrap, MySQL

Duration : 1 Month

Description : Availability of right group of blood in right amount in a very short period of notice can be very challenging at times. Our system provides a platform where requirements and availability of blood can be maintained and updates in real time. It tries to address this by registering blood banks, hospitals, donor as well as individual recipients on one platform. One can submit the requirement of blood and the system suggest best possible sources of blood within these constraints.

Title : college ERP system

Platform : JAVA

Duration : 6 Months

Description : Developing a college ERP system using php and MYSQL which will have multiple features like digitally signed documents, monitoring various activity. Its purpose is to automate and centralize the whole system of the department. We are attempting to improve our existing system that runs on pen and papers. The main goal of the system is to automate the process carried out in the organization with improved performance and realize the vision of paperless works.
