Softlabs Group Pvt Ltd
01/2021 – present
Achievement / Tasks
- working as a php laravel developer
- Experience with developing backend in php laravel for project management system , Customer Relationship Management (CRM) System, Human Resource Management System (HRMS) , Project Management System and college information system

SKILLS

Programming Languages :
React js ,Redux , laravel

Database
MySQL

Web Technologies
JS, HTML5, CSS3, Bootstrap Jquery

Design
Adobe XD

Project #1: College information system

Overview:
The College Information System is a centralized platform catering to the diverse needs of a college, ranging from student records and academic data to administrative tasks. It includes a web application for administrative functions and a mobile application for student access and interaction.

Roles and Responsibilities:

Database Management:
- Responsible for maintaining and updating the student database, including personal details, academic records, and other relevant information.
- Ensures data accuracy and efficient retrieval for administrative purposes.

Backend Development:
- Develops and maintains the backend functionality of the system, managing server-side logic for student enrollment, grades, and other academic processes.
- Ensures the smooth flow of information between the database and the user interface.

Front-end Development:
- Develops and maintains the frontend functionality of the system, managing UI and logic for integrating Api's.
- Ensures nice and understandable UI interface.

User Interface Design:
- Designs and implements the visual aspects of the system, creating an appealing and user-centric interface.
- Ensures a consistent and responsive design across different devices and screen sizes.

Tools Used :-
- React js
- Redux
- Laravel
- Jquery
- Bootstrap
- Css
- Mysql
- GIT
- Postman

PROJECTS

Project #2: Softlabs ERP

Overview :
The softlabs ERP has 3 types **Customer Relationship Management (CRM) System :** The Customer Relationship Management System is a powerful platform designed to organize and optimize various aspects of customer interactions and relationships. It comprises a web application for CRM-related tasks for real-time access to customer information, **Human Resource Management System (HRMS) :** The Human Resource Management System is a comprehensive platform designed to streamline and manage various aspects of human resource functions within an organization. It includes a web application for HR-related tasks **and Project Management System :** The Project Management System is a robust platform designed to streamline and organize various aspects of project development and execution. It consists of a web application for project management tasks for on-the-go access to project information.

Roles and Responsibilities:

User Interface Design:
- Designs and implements the visual aspects of the system, creating an appealing and user-centric interface.
- Ensures a consistent and responsive design across different devices and screen sizes.

User Experience (UX) Design:
- Optimizes the user journey by creating wireframes and prototypes, considering user interactions and feedback.
- Collaborates with UX designers to enhance the overall user experience.

Front-End Development:
- Implements the front-end functionality using technologies such as React js , Redux, JQuery, CSS, and JavaScript.
- Ensures the effective integration of Api's and user interactions.

Database Management:
- Manages and updates the ERP database, including customer profiles, interactions, sales data, and other relevant customer-related information.
- Ensures data accuracy and facilitates efficient retrieval for customer engagement and strategic decision-making.

Backend Development:
- Develops and maintains the backend functionality of the system, handling server-side logic for lead management, PMS, HRMS and customer communication.
- Ensures seamless integration between the database and the user interface for effective CRM,PMS and HRMS operations.

Tools Used :
- React js
- Redux
- Laravel
- Jquery
- Bootstrap
- Css
- Mysql
- GIT
- Postman

Project #3: Dating App

Overview:
This is a subscription based Mobile Dating Application developed for the people in USA. The app lets the users set up its general profile and specific profile features so that user can look for matches based on location and profile features.

Roles and Responsibilities:

User Interface Design:
- Designs visually appealing and responsive interfaces that resonate with the dating app's theme, fostering a positive user experience.
- Ensures the design reflects the brand identity and aligns with the target audience.

React.js Development:
- Utilizes React.js to build dynamic and interactive components for the dating app.
- Implements features such as user profiles, messaging

API Integration:
- Integrates with backend APIs to fetch and update user data, profiles, and interactions.
- Collaborates with the backend development team to establish seamless communication between the front end and server.

Collaboration with Back-End Developers:
- Works closely with back-end developers to integrate front-end components with the server-side logic.
- Collaborates on API integration, addressing queries, and ensuring a smooth communication flow.

Testing:
- Conducts front-end testing to identify and address bugs or issues related to user interface and functionality.
- Collaborates with quality assurance teams to ensure a seamless end-to-end user experience.

Tools Used :-
- React js
- Redux
- Jquery
- Bootstrap
- Css
- GIT

Project #4: Nippon Asset Management Singapore CMS

Overview :
   Developed and maintained a highly customizable public website for NAMS, with a fully-fledged admin interface for managing content using React. The admin interface allows NAMS to easily add, edit, and delete sections, blog posts, and other types of content.

Roles and Responsibilities:
- UI design and development.
- Api integration
- Coding and Unit Testing
- Feature brainstorming and collaboration.

Tools Used :
- React js
- Redux
- Jquery
- Bootstrap
- Css
- GIT

Project #5: GK store – Grocery store

Overview :
This is a B2B e-Commerce Application for grocery items to be used in Sweden. Bulk buyers like chain of restaurants order grocery from this portal for their different locations. Customer companies can schedule orders for the entire year and those get automatically executed to the respective locations.

Responsibilities:
- Coding and Unit Testing.
- Integration of APIs
- Peer code review.

Tools Used :
- React js
- Redux
- Jquery
- Bootstrap
- Css
- GIT

Project #6: 91 Restaurant

Overview:
This is a Food Delivery App for a specific restaurant in South Africa. Any user can browse through the menu items provided by the restaurant on the App. Users can place the orders and pay with a payment gateway link. The order status can be tracked with live location of delivery person.

Responsibilities:
- Coding and Unit Testing.
- Integration of APIs
- Peer code review.

Tools Used :
- React js , Redux , Jquery , Bootstrap , Css , GIT
