Projects

Project: Business Service Orchestrator(BSO).

Project Description:
The purpose of this project is to provide the direct communication between the frontend and Integrated Communications Operation Management System (ICOMS). Basically BSO is an intermediary component between any NC component and ICOMS. It provides integration capabilities for various external user interfaces to be able to access the ICOMS.

My role and responsibility include:
- Involved in development of API's.
- Worked on connecting to client/server through SoapUI by sending request/responses.
- Implemented the client API's and tested in the server.

Project: Order Entry(OE).

Project Description:
It is a desktop used by order entry(OE) which holds the information about the orders placed by the customers, as well as billing related operations while placing the order.

My role and responsibility include:
- Worked on requirement analysis, data Modeling development & Testing.
- Involved in development and creating technical design document by customizing the existing template and using API provided by the platform.

Training and Certificates

- Completed training provided by Netcracker technology, Bangalore.

Declaration

I hereby declare that the above statements are correct and true to the best of my knowledge.
