BE	Savitribai Phule	63.46	First Class	2012-16

PROJECTS:

- **Maze Pune :**

  Technologies : - Angular 4, Android,NodeJs**,** MySQL

  Maze Pune application provides advertising platform for small business and local shops. We are show the Pune informations, Emergency services,Local

shop offers ,Events, Entertainment videos,God Arati, News.

- **Digital Receipts :**

  Technologies :- NodeJS, MongoDB

  The Digital Receipts application provides you Digital Receipts of what things you buy from shop and moving towards the cashless transaction. We are maintaining bill history.

- **Silicon :**

  Technologies : - Angular 4,NodeJS, MongoDB

  The silicon application is complain booking application . In this app customer book complain for any issue and Admin assigned this complain to engineer and then engineer solve this issue.

- **GstSure :**

  Technologies :- NodeJS, MongoDB

  This is the GST management project, In this project we created Role Base Access Management system for Small and Medium Enterprises and Traders.

- **VerifiedFirst :**

  Technologies :- NodeJS**,**AWS lambda,AWS API Gateway.

  This is the background verification project , we create serverless functions for accessing candidates data from third party rest api and send background check result to clients. We used AWS lambda function for calling client rest API's and AWS Cloud Formation Template for deployment.

- **ImagineBC :**

  Technologies :- NodeJS,Mysql,Blockchain,Docker,Kubernetes,Helm chart,Elastic search,Azure service bus,Jenkins.

  In the Imagine BC, Everything is stored securely, and user is the only one with the key to access it. It's our job to create opportunities for the user to share user information with companies interested in purchasing it, while keeping users information safe and secure.Through blockchain technology, we can create trust and ensure that only user can decide who has access to it.
