Project Details

1. **Car Rental System**

   Type : Website

   Technology : HTML, CSS, JavaScript

   Database : MySQL

Tool : Xammp, Browser, MySQL

Description : The car rental website project aims to provide users with the ability to easily rent cars online. Users can browse the available cars, check their availability, and choose the one that suits their needs. Additionally, the system will incorporate a login feature, allowing users to create accounts, log in, and manage their rental preferences and history. This project seeks to streamline the car rental process and enhance the user experience by offering a convenient online platform for renting cars.

2. **Android Chat Application**

   Type : Android application

   Technology : XML, Java

   Database : Firebase

   Tool : Android Studio

   Description : The Android chat application project aims to facilitate seamless communication among users by enabling them to engage in one-on-one conversations with friends and family, as well as participate in group chats. The application will offer features for sending text messages, sharing multimedia content, and staying connected in real-time. This project's goal is to provide an intuitive and user-friendly platform for users to interact, exchange information, and maintain relationships through convenient and efficient chatting capabilities.
