## P R O J E C T

RAILGRAM
The Railgram app helps gathering useful information about trains availability that can help one while creating a travel plan. You can follow a train based on its availability. You can create routes that can be used to reach from a source to a destination and publish them. You can also follow a route published by others. It also provides a feature to assist a travelling passenger with runtime route to reach the destination based on connecting train schedule and availability of seats in the train.

**Platform**
Angular 7, Bootstrap 4, NodeJS, MySQL.

**Activities** – Developing the end-to-end solution.

**GitHub** URL – https://github.com/ISSRAH/railgram (Work in progress)

SMART BARRIER BASED ON IOT
The project is aimed at providing security services in college by making access to different areas of campus, restricted such that every person requires a smart card to enter any building within the premises.

**Platform**
Raspberry pi 3, Arduino, AWS.

**Activities -** Developed the prototype.
